CONSULTATIONS AND QUERIES

a. Question: The required generation capacity of the Solar Panel for the domestic systems could be reduced and the energy availability would not be affected. Can proposals with lower than 120Wp be considered?

Response: Please include both options in the proposal: 1) following the ToR design standards and 2) following your recommended standards.

b. Would batteries at a different nominal voltage for the communal systems be applicable? Could other possibilities of generation and battery capacity be considered?

Response: Other options could be considered. However, the requirements stated in the Tender ToR are the preferred ones. If there are enough technical justification, please include both options in the proposal: 1) following the ToR design standards and 2) following your recommended standards.
